tamhuynh.me@gmail.com
Skype: tamhuynh.0407

I have 5+ years of experience with Android. Worked as a Full-stack developer before help me understand the communication between frontend and backend and give a better result.

Coding convention and clean code are significantly important to me, especially if you are a leader. Your code is clean and clear, so does your teammates. Set a good example within the team to make us all grow.

About management ability: Keep the balance between business thinking and technical limitation is a problem for any product company. I have a developer background, with a proper business mindset help me understand both needs and find the solution, keeping all team on the target.

I want to work in a challenging environment where I could utilize my skills and use my knowledge to better the company's products
